

AUTISM & ADHD WHAT HAS DIET GOT TO DO WITH IT?

A Half Day Training Course with David Rex, Dietitian
Thursday 8th June 2017, Glasgow

Good Nutrition is vital to the health and wellbeing of children in general, and those with Autism Spectrum Disorder or ADHD in particular. Indeed many children on the autistic spectrum have eating problems directly related to a combination of factors that can be part of being on the spectrum. A restricted diet can have medical, developmental and social consequences. At the same time, a wide range of nutritional therapies are promoted online so families need to be supported in critically appraising their likely value, safety and practicality. Through a lively mix of presentations, case studies and discussion you will learn:

- ▶ Why are children with ASD more likely to be highly selective eaters?
- ▶ What impact does selective eating have?
- ▶ How can we support families to effect dietary change among selective eaters?
- ▶ With so much information online, how can we support parents of children with ASD and ASD related conditions (ADHD) to make safe and practical decisions on nutritional interventions?

4 Easy Ways to Book
